Actions

NCBI RefSeq assembly
GCF_027497495.1

Submitted GenBank assembly
GCA_027497495.1

Taxon
Streptomyces tubercidicus

Strain
DSM 40261

Relation to type material
assembly from type material

Submitter
Bielefeld University

Date
Dec 29, 2022

Sample details

BioSample ID
SAMN31919750

Description
Streptomyces tubercidicus

Submitter
Bielefeld University

Strain
DSM 40261

Isolation source
soil

Geographic location
Japan

Sample type
pure culture

Biomaterial provider
DSM 40261

Culture collection
DSM:40261

Type-material
type strain of Streptomyces tubercidicus

Sample name
STRTU

SRA
SRS15985559

Models
Microbe, viral or environmental

Package
Microbe.1.0

Submission date
2022-11-29T05:53:05.220

Publication date
2022-11-29T00:00:00.000

Assembly methods

Sequencing technology
Oxford Nanopore GridION; Illumina MiSeq

Comment
Bacteria and source DNA available from DSM 40261
The annotation was added by the NCBI Prokaryotic Genome Annotation Pipeline (PGAP). Information about PGAP can be found here: https://www.ncbi.nlm.nih.gov/genome/annotation_prok/

Assembly method
flye v. 2.9; Newbler v. 2.8

About PGAP

The NCBI Prokaryotic Genome Annotation Pipeline (PGAP) uses multiple approaches to predict protein-coding and RNA genes and other functional elements directly from sequence.

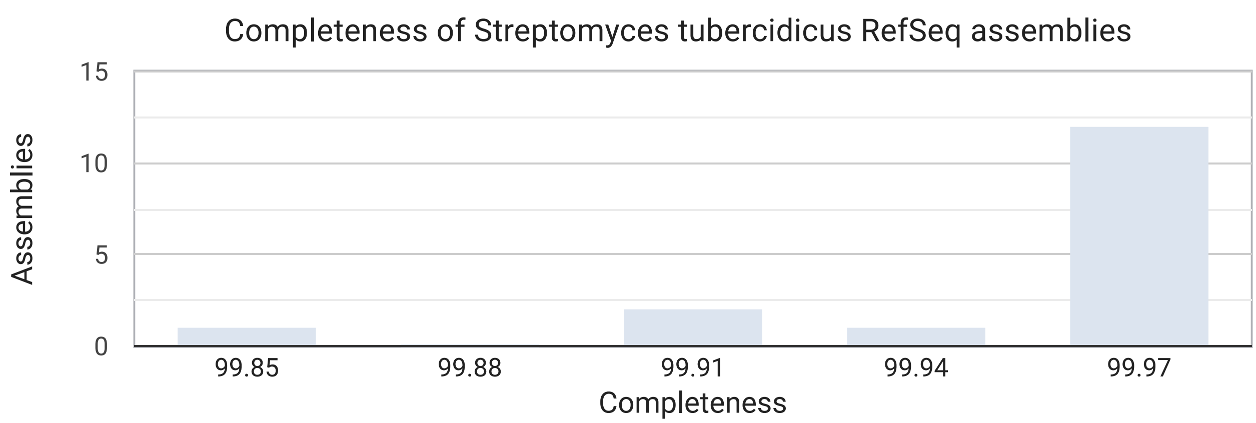
Quality analysis

CheckM analysis (v1.2.4)

Completeness: 100% (29th Percentile, dark blue bar)

Contamination: 1.33%



Calculated on the Prokaryotic Genome Annotation Pipeline (PGAP) gene set with the Streptomyces CheckM marker set. For more information on CheckM, see Parks, et al. Genome Res (2015).
